In a recent survey, employers of DSU graduates expressed a high degree of satisfaction with the graduates’ ability to learn on the job and their ability to use information ethically. Other areas rated high include the graduates’ ability to adapt to changes in the computing environment, to use computer applications effectively and to select and apply appropriate technology. According to the employers, DSU graduates require less training than other graduates, particularly in the computer skills area. The DSU Employer Survey has been used since 1993 to survey employers of the previous year’s graduates. The employers rate the DSU graduates in three areas: computer skills, communication/socialization skills, and job-related skills. This information is used as one method of evaluating the student learning outcomes of DSU’s general education and major-field curriculum.
